PROMPT: "THE SITUATIONAL PROBLEM-SOLVER" FRAMEWORK (USE CASE COPY)

Copy and paste everything below into Claude with your inputs.

REQUIRED INPUTS

I am generating ad copy for my brand **[YOUR BRAND NAME]**. We sell **[PRODUCT].**

We are writing for **[INSERT MACRO AVATAR # HERE]**

Our website is **[YOUR WEBSITE].**

[COPY & PASTE PRODUCT DESCRIPTION]

[ATTACH MACRO AVATAR SHEET OUTPUT]

[ATTACH MACRO AVATAR LANGUAGE BANK OUTPUT]

WHAT THIS FRAMEWORK DOES

Generates short-form ad copy (350-450 words) using "The Situational Problem-Solver" framework.

This framework opens with a hyper-specific situation/use case, then shows how the product solves the problem in that exact scenario.

Structure: 0. Situational hook (1-3 sentences)

1. "Seriously, this is a game-changer" validation
2. Product name introduction early

3. "Here's why it actually helps" transition
4. Paint the situation problem (3-4 sentences)
5. How product solves it mechanistically
6. Visual formatting with ✅ checkmarks for benefits
7. Contrast (when you do X vs when you don't)
8. "So next time..." + emotional resolution + CTA

Total length: 350-450 words

Optimized for Facebook/Instagram: Hyper-specific opening, heavy line breaks, benefits-focused.

PHASE 1: PAIN POINT SELECTION

First, I'll analyze your Macro Avatar sheet and extract all the pain points.

OUTPUT:

=== PAIN POINTS IDENTIFIED ===

Based on your Macro Avatar sheet, here are the primary pain points:

1. [Pain point from avatar sheet]
    - Emotional intensity: [X/5 based on language bank]
    - Primary emotion: [Fear/Frustration/Anxiety/Guilt]
    - Core desire behind this pain: [What they emotionally want]
    - Language bank coverage: [Strong/Moderate/Light]
    - Situational potential: [High/Medium/Low - can this be tied to a specific situation/use case?]
2. [Pain point from avatar sheet]
    - Emotional intensity: [X/5]
    - Primary emotion: [Fear/Frustration/Anxiety/Guilt]
    - Core desire behind this pain: [What they emotionally want]
    - Language bank coverage: [Strong/Moderate/Light]
    - Situational potential: [High/Medium/Low]
3. [Pain point from avatar sheet]
    - Emotional intensity: [X/5]
    - Primary emotion: [Fear/Frustration/Anxiety/Guilt]
    - Core desire behind this pain: [What they emotionally want]

    - Language bank coverage: [Strong/Moderate/Light]
    - Situational potential: [High/Medium/Low]
4. [Pain point from avatar sheet]

    - Emotional intensity: [X/5]
    - Primary emotion: [Fear/Frustration/Anxiety/Guilt]
    - Core desire behind this pain: [What they emotionally want]
    - Language bank coverage: [Strong/Moderate/Light]
    - Situational potential: [High/Medium/Low]

[Continue for all pain points found in avatar sheet, typically 3-7 total]

👉 SELECT THE PAIN POINT FOR THIS AD: Type the number (1-7)

PHASE 2: SITUATION GENERATION

Now I'll generate specific situations/use cases where this pain point becomes acute.

OUTPUT:

=== SITUATION GENERATION ===

Pain Point Being Addressed: [The selected pain point]

Core Emotional Desire: [What they emotionally want]

Primary Emotion: [Fear/Frustration/Anxiety/Guilt]

I'll generate 8 situation/use case options that make this pain point hyper-specific and relatable.

SITUATION REQUIREMENTS:

- Specific enough to create "that's exactly me" reaction
- Related to when/where the pain point becomes most acute
- Broad enough for cold traffic (not TOO niche)
- Should paint a vivid picture in 1-2 sentences
- Can be a specific time, place, event, or scenario

SITUATION OPTIONS:

SITUATION #1: "[Situation description]"

- Why it's specific: [What makes this relatable and concrete]
- Why it works for this pain point: [How the pain point shows up in this situation]
- Emotional intensity in this moment: [X/5]

SITUATION #2: "[Situation]"

- Why it's specific: [Explanation]
- Why it works for this pain point: [Connection]
- Emotional intensity in this moment: [X/5]

SITUATION #3: "[Situation]"

- Why it's specific: [Explanation]
- Why it works for this pain point: [Connection]
- Emotional intensity in this moment: [X/5]

SITUATION #4: "[Situation]"

- Why it's specific: [Explanation]
- Why it works for this pain point: [Connection]
- Emotional intensity in this moment: [X/5]

SITUATION #5: "[Situation]"

- Why it's specific: [Explanation]
- Why it works for this pain point: [Connection]
- Emotional intensity in this moment: [X/5]

SITUATION #6: "[Situation]"

- Why it's specific: [Explanation]
- Why it works for this pain point: [Connection]
- Emotional intensity in this moment: [X/5]

SITUATION #7: "[Situation]"

- Why it's specific: [Explanation]
- Why it works for this pain point: [Connection]
- Emotional intensity in this moment: [X/5]

SITUATION #8: "[Situation]"

- Why it's specific: [Explanation]
- Why it works for this pain point: [Connection]
- Emotional intensity in this moment: [X/5]

TOP 3 RECOMMENDED:

→ Situation #[X] - [Why this creates best specificity and relatability] → Situation #[X] - [Why this works well] → Situation #[X] - [Why this is effective]

👉 SELECT YOUR SITUATION: Type the number (1-8)

OR

Type "YOUR OWN: [your situation]" if you have a different one

Once selected, type "CONTINUE TO LANGUAGE EXTRACTION"

PHASE 3: PAIN POINT LANGUAGE EXTRACTION

Now I'll extract the exact language your avatar uses for this pain point in this specific situation.

OUTPUT:

=== PAIN POINT LANGUAGE EXTRACTION ===

Pain Point Being Addressed: [The selected pain point]

Situation Selected: "[The situation]"

Core Emotional Desire: [What they emotionally want]

Avatar's Exact Language (From Language Bank):

Situation-specific phrases (use when describing the situation problem):

- "[Exact phrase from language bank]" from [Section name]
- "[Exact phrase from language bank]" from [Section name]

- "[Exact phrase from language bank]" from [Section name] [3-5 phrases total that relate to this situation]

Problem consequence phrases (use for negative outcomes without solution):

- "[Exact phrase about consequences]" from [Section name]
- "[Exact phrase about consequences]" from [Section name] [2-3 phrases total]

Benefit phrases (use for ✅ checkmarks section):

- "[Exact phrase about desired outcome]" from [Section name]
- "[Exact phrase about benefit]" from [Section name] [3-4 phrases total]

Desire resolution phrases (use for emotional resolution):

- "[Exact phrase about what they want emotionally]" from [Section name]
- "[Exact phrase about desired state]" from [Section name] [2-3 phrases about relief, peace, control, confidence]

Emotional Tone: [Primary emotion: Fear/Frustration/Anxiety/Guilt]

Intensity Level: [X/5]

👉 Type "CONTINUE TO EMOJI SELECTION"

PHASE 4: EMOJI STRATEGY

Now I'll analyze your product, avatar, situation, and pain point to recommend contextually appropriate emojis.

OUTPUT:

=== EMOJI RECOMMENDATIONS ===

Context Analysis:

Product category: [Category] Avatar demographics: [Gender, age range, key characteristics] Pain point emotion: [Primary emotion] Situation context: [The specific situation selected] Framework: Situational Problem-Solver (benefits-focused, practical tone)

Recommended Emoji Set for This Ad:

For Benefits (4-6 options): ✅ [Checkmark - universal] [Emoji] - [Why this makes sense for this context/situation] [Emoji] - [Why this makes sense for this context/situation] [Emoji] - [Why this makes sense for this context/situation] [Emoji] - [Why this makes sense for this context/situation]

For Problems/Negatives (1-2 options): ❌ [X mark - universal] [Emoji] - [Why this makes sense for this context/situation]

For Product/Solution (1-2 options): [Emoji] - [Why this makes sense for this context/situation] [Emoji] - [Why this makes sense for this context/situation]

For CTA (1-2 options): 👉 [Pointing finger - universal] [Emoji] - [Why this makes sense for this context/situation]

Total Emoji Budget: 8-12 emojis across the entire ad

This framework uses moderate emoji count, heavily weighted toward ✅ checkmarks in benefits section.

Example Placement Strategy:

- Section 0 (Situational hook): 0-1 emojis
- Section 1 (Validation): 1 emoji (game-changer related)
- Section 2 (Product intro): 1 emoji
- Section 4 (Situation problem): 0-1 problem emojis
- Section 6 (Benefits with checkmarks): 3-5 ✅ bullets
- Section 8 (CTA): 1 CTA emoji

👉 APPROVE EMOJI STRATEGY: Type "APPROVED" to use these emojis Type "MODIFY: [your changes]" to adjust Type "MINIMAL EMOJIS" to only use ✅ 👉

Once approved, type "GENERATE COPY"

PHASE 5: COPY GENERATION

Now I'll generate the complete ad using the situational problem-solver framework.

CRITICAL WRITING RULES

1. HYPER-SPECIFIC SITUATION

Section 0 must paint a vivid, specific scenario that makes the reader think "that's exactly me."

Not generic. Concrete details matter.

2. AVATAR LANGUAGE IS EVERYTHING

Use exact phrases from language bank:

- In situation problem description
- In benefits/checkmarks section
- In emotional resolution

3. SENTENCE STRUCTURE

Average sentence length: 8-12 words.

This framework is punchy and practical.

Short sentences. Clear benefits.

4. FORMATTING FOR FACEBOOK/INSTAGRAM

Line Breaks:

- Break after every 1-2 sentences
- Extra space around ✅ benefits section
- Mobile-first

Emoji Usage:

- Use ONLY approved emojis
- Total: 8-12 emojis
- Heavy use of ✅ in benefits section

Paragraph Structure:

- 1-2 sentences per paragraph MAX
- Benefits section gets line breaks between each

5. PRODUCT NAME EARLY

Product name appears in Section 2 (early in the ad).

This is different from other frameworks where product comes later.

6. CONTRAST STRUCTURE

Section 7 must show the contrast: "When you [don't use product]..." vs "When you [use product]..."

This reinforces the value.

7. EMOTIONAL DESIRE RESOLUTION

In Section 8, before CTA, include 1-2 sentences resolving the core emotional desire.

Use desire resolution phrases from language bank.

8. BENEFITS-FOCUSED TONE

This framework is more practical/tactical than emotional.

Focus on clear, tangible benefits.

Less storytelling, more problem-solving.

COPY OUTPUT

=== THE SITUATIONAL PROBLEM-SOLVER AD ===

TARGETING REMINDER: Avatar: [Identifier] Pain Point: [The specific pain being addressed] Situation: "[The specific situation]" Core Emotional Desire: [What they emotionally want] Emotional Tone: [Primary emotion] Intensity: [X/5] Emoji Strategy: [Approved emoji set]

SECTION 0: SITUATIONAL HOOK

[The specific situation - paint vivid picture in 1-3 sentences]

[Use concrete details: time, place, sensory elements]

[Make them think "that's exactly me"]

Word count target: 20-40 words

Formatting: Line breaks for impact. Optional emoji if approved.

EXAMPLE FORMATS (DIFFERENT NICHES):

For cat water fountain (travel situation):

> If you're traveling with your senior cat this holiday season, you need to think about their hydration.
>
> Long car rides. New environments. Stress.
>
> All of it makes cats drink less.

For knee pain cream (morning situation):

> If you wake up every morning dreading the first steps out of bed because of knee pain...
>
> That stiffness. That sharp ache when you put weight on it.
>
> You need this.

For baby monitor (nighttime situation):

> If you're the parent who checks the baby monitor 47 times before you can fall asleep...
>
> Staring at that grainy video. Holding your breath to hear them breathe.
>
> There's a better way.

For productivity app (work situation):

> If you're staring at your to-do list at 9 AM already feeling overwhelmed and defeated...
>
> Twenty tasks. All urgent. No idea where to start.
>
> This will help.

SECTION 1: VALIDATION

[Validation statement - "Seriously, this is a game-changer" or similar]

[Optional approved emoji]

Word count target: 10-20 words

Formatting: Short. Punchy. Validates their need.

EXAMPLE FORMATS (DIFFERENT NICHES):

> Seriously, this is a total game-changer. ✈️
>
> This changed everything for me. 💪
>
> I'm not exaggerating when I say this saved my sanity. 🙏
>
> This one thing makes all the difference. ✨

SECTION 2: PRODUCT INTRODUCTION (EARLY)

[Product name + what it is - 1-2 sentences]

[Line break]

[Optional product emoji]

Word count target: 15-30 words

Formatting: Product name appears here (early in ad). Keep simple.

EXAMPLE FORMATS (DIFFERENT NICHES):

For cat water fountain:

> It's called HydraPet.
>
> A portable water fountain designed specifically for travel with cats.

For knee pain cream:

> It's called MorningEase.
>
> A fast-absorbing cream designed for morning joint stiffness.

For baby monitor:

> It's called DreamGuard Pro.

A smart baby monitor with real-time breathing detection.

For productivity app:

It's called TaskFlow.

An AI-powered app that prioritizes your tasks based on urgency and energy level.

SECTION 3: TRANSITION

["Here's why it can actually help" or "Here's how it solves this exact problem" or similar]

Word count target: 10-20 words

Formatting: Bridge to situation problem description.

SECTION 4: PAINT THE SITUATION PROBLEM

[Describe the specific problem in this situation - 3-4 sentences]

[Use avatar language from language bank]

[Make it visceral and relatable]

[Line break after every 1-2 sentences]

Word count target: 50-70 words

Formatting: Build the problem intensity specific to this situation.

EXAMPLE FORMATS (DIFFERENT NICHES):

For cat water fountain (travel):

You know what it's like.

You're in the hotel room or at your family's house. Your cat won't drink from the unfamiliar bowl. You're anxiously watching them, wondering if they're getting dehydrated.

And the stress just makes everything worse.

For knee pain cream (morning):

> That first step out of bed hits different.
>
> Your knee is stiff from sleeping. It feels like grinding bone on bone. You're hobbling to the bathroom, wincing with every step.
>
> And you haven't even started your day yet.

For baby monitor (nighttime):

> You finally got them down.
>
> But now you're lying in bed, staring at your phone. Checking the monitor every two minutes. Your anxiety spiking every time they shift or make a sound.
>
> You're exhausted but you can't sleep because you're too busy monitoring.

For productivity app (work):

> Your inbox is exploding.
>
> You've got three meetings today. A project due tomorrow. And seventeen other things competing for your attention.
>
> By 10 AM you're already behind and feeling like you're drowning.

SECTION 5: HOW PRODUCT SOLVES IT MECHANISTICALLY

[Explain mechanism - 2-3 sentences]

[How it specifically addresses the situation problem]

[Line break after every 1-2 sentences]

Word count target: 40-60 words

Formatting: Connect product features directly to situation pain points.

EXAMPLE FORMATS (DIFFERENT NICHES):

For cat water fountain (travel):

> HydraPet uses a quiet, battery-powered flow system.

The gentle movement attracts cats naturally — even in unfamiliar places.

And it's compact enough to pack but holds enough water for a full day.

Your cat stays hydrated without you having to stress about it.

For knee pain cream (morning):

MorningEase contains fast-acting natural anti-inflammatories.

You apply it the moment you wake up. It absorbs in under 60 seconds.

By the time you're out of the bathroom, the stiffness is already easing.

For baby monitor (nighttime):

DreamGuard Pro tracks breathing patterns in real-time.

If anything's off, you get an instant alert. Otherwise? Silence.

You're not staring at the screen guessing if they're okay. You know they're okay.

For productivity app (work):

TaskFlow uses AI to scan your calendar, deadlines, and energy patterns.

It tells you exactly which task to do first. Not based on urgency alone, but on when you're most likely to actually finish it.

No more decision paralysis. Just clarity.

SECTION 6: VISUAL FORMATTING WITH ✅ BENEFITS

[Transition if needed, or jump straight into checkmarks]

[Line break]

✅ [Benefit 1 - use avatar language]

[Line break]

✅ [Benefit 2 - use avatar language]

[Line break]

✅ [Benefit 3 - use avatar language]

[Line break]

[Optional ✅ benefit 4-5 if supported by avatar research]

Word count target: 40-60 words

Formatting: Each benefit gets own line. Use avatar language from benefits phrases.

EXAMPLE FORMATS (DIFFERENT NICHES):

For cat water fountain (travel):

✅ Your cat drinks naturally without forcing it

✅ You stop anxiously checking if they're hydrated

✅ No more carrying heavy water bottles or worrying about spills

✅ They stay calm and comfortable even in new places

For knee pain cream (morning):

✅ You walk without that sharp grinding pain

✅ No more hobbling around for the first hour

✅ Fast-absorbing so you're not sticky or greasy

✅ You start your day feeling capable instead of defeated

For baby monitor (nighttime):

✅ You actually sleep instead of monitoring all night

✅ Real-time alerts so you know immediately if something's wrong

✅ No more paranoid checking every five minutes

✅ You wake up rested instead of exhausted

For productivity app (work):

✅ You know exactly what to do first (no more decision paralysis)

✅ Tasks get done faster because you're working with your energy, not against it

> ✅ You stop feeling overwhelmed by 10 AM
>
> ✅ You actually finish your day feeling accomplished

SECTION 7: CONTRAST (WHEN YOU DO X VS WHEN YOU DON'T)

[When you don't use product: 1-2 sentences describing the problem state]

[Line break]

[When you do use product: 1-2 sentences describing the solution state]

Word count target: 40-60 words

Formatting: Clear before/after contrast. Line break between states.

EXAMPLE FORMATS (DIFFERENT NICHES):

For cat water fountain (travel):

> When you don't have it? You're anxiously monitoring their water intake and stressing about dehydration the entire trip.
>
> When you do? You're actually enjoying the trip because you know they're hydrated and comfortable.

For knee pain cream (morning):

> Without it? You're starting every single day in pain, hobbling around, feeling older than you are.
>
> With it? You're walking normally within minutes, ready to actually live your day.

For baby monitor (nighttime):

> Without it? You're lying awake, checking the monitor obsessively, too anxious to sleep.
>
> With it? You're sleeping soundly because you know you'll be alerted if anything's wrong.

For productivity app (work):

> Without it? You're overwhelmed by 10 AM, bouncing between tasks, never finishing anything.

With it? You're focused, finishing tasks one by one, and actually making progress.

SECTION 8: EMOTIONAL RESOLUTION + CTA

["So next time [situation]..." - 1 sentence callback to opening]

[Line break]

EMOTIONAL DESIRE RESOLUTION (CRITICAL):

[1-2 sentences resolving the core emotional desire using desire resolution phrases from language bank]

[Line break]

[CTA with product name - 1 sentence]

[Line break]

[CTA emoji] [Direct action with URL]

[Line break]

[Risk reversal - 1 sentence]

[Line break]

[URL]

Word count target: 60-80 words

Formatting: Situation callback + emotional resolution + CTA. Line breaks throughout.

EXAMPLE FORMATS (DIFFERENT NICHES):

For cat water fountain (travel):

> So next time you're traveling with your senior cat, don't stress about hydration.
>
> You can finally stop living in constant worry that they're not drinking enough.
>
> Get HydraPet at [URL]
>
> 👉 [URL]

30-day money-back guarantee if it doesn't help.

[URL]

For knee pain cream (morning):

So next time you wake up dreading those first steps, reach for MorningEase.

You can finally stop feeling like your body is betraying you every morning.

Try MorningEase risk-free at [URL]

👉 [URL]

Full refund if you're not walking pain-free within a week.

[URL]

For baby monitor (nighttime):

So next time you put your baby down for the night, let DreamGuard do the monitoring.

You can finally stop sacrificing your own sleep to anxiously watch them all night.

Get DreamGuard Pro at [URL]

👉 [URL]

60-day trial. Return it if you don't sleep better.

[URL]

For productivity app (work):

So next time you're staring at an overwhelming to-do list, open TaskFlow.

You can finally stop feeling like you're drowning before you even start your day.

Try TaskFlow free for 14 days at [URL]

👉 [URL]

Cancel anytime if it doesn't help you get things done.

==========

📊 COPY METADATA

Total Word Count: [X words - should be 350-450]

Situation Used: "[The situation]"

- Specificity level: [High/Medium - should be high]
- Relatability: [How well this captures avatar's experience]

Avatar Language Integration:

Section 0 (Situational Hook):

- "[Exact phrase if used]" from [Language Bank Section]

Section 4 (Situation Problem):

- "[Exact phrase used]" from [Language Bank Section]
- "[Exact phrase used]" from [Language Bank Section]

Section 6 (Benefits):

- "[Exact phrase used]" from [Language Bank Section]
- "[Exact phrase used]" from [Language Bank Section]
- "[Exact phrase used]" from [Language Bank Section]

Section 8 (Emotional Resolution):

- "[Exact phrase used for emotional resolution]" from [Language Bank Section]

Total phrases used: [X - should be 8-12]

Sentence Structure Analysis:

- Average sentence length: [X words - should be 8-12]
- Longest sentence: [X words]
- Shortest sentence: [X words]
- Rhythm: [Should be punchy and practical]

Formatting Analysis:

Line Breaks:

- Total line breaks: [X - should be 18-25]
- Average sentences per paragraph: [X - should be 1-2]
- Dense blocks: [X - should be 0]

Emoji Usage:

- Total emojis: [X - should be 8-12]
- ✅ bullets in benefits: [X - should be 3-5]
- Product emoji: [X]
- CTA emoji: [X]
- All from approved set: [Yes/No]

Mobile Readability:

- Scannability: [High/Medium/Low - should be High]
- White space: [Generous/Adequate - should be Generous]
- Benefits section clear: [Yes/No - should be Yes]

Emotional Resolution:

- Core desire addressed: [Yes/No]
- Uses desire resolution phrases: [Yes/No]
- Feels like emotional payoff: [Yes/No]

✓ QUALITY CHECKLIST

Situational Specificity: ✓ Section 0 paints vivid, specific situation ✓ Situation is relatable to target avatar ✓ Concrete details (time, place, sensory) ✓ Makes reader think "that's exactly me"

Framework Structure: ✓ Situational hook (Section 0) ✓ Validation (Section 1) ✓ Product introduced early (Section 2) ✓ Transition (Section 3) ✓ Situation problem painted (Section 4) ✓ Mechanism explanation (Section 5) ✓ Benefits with ✅ checkmarks (Section 6 - 3-5 bullets) ✓ Contrast before/after (Section 7) ✓ "So next time..." callback (Section 8) ✓ Emotional desire resolved (Section 8) ✓ CTA with risk reversal (Section 8)

Language Bank Integration: ✓ Avatar phrases in situation problem ✓ Avatar phrases in benefits section ✓ Desire resolution phrases in Section 8 ✓ 8-12 exact phrases used naturally

Sentence Structure: ✓ Average 8-12 words per sentence ✓ Punchy, practical rhythm ✓ Varied lengths ✓ Natural flow

Formatting: ✓ Line breaks after every 1-2 sentences ✓ NO dense blocks ✓ ✅ bullets formatted with spacing (3-5) ✓ Emojis from approved set only ✓ Total emoji count: 8-12 ✓ Mobile-friendly

Emotional Resolution: ✓ Section 8 includes desire resolution ✓ Uses language bank phrases ✓ Addresses emotional want ✓ Feels like relief/permission ✓ Before final CTA

Tone: ✓ Practical and benefits-focused ✓ Less storytelling, more problem-solving ✓ Clear and tactical ✓ Situation-specific throughout

---

👉 USER ACTIONS:

Type "APPROVED" → Copy is ready

Type "REVISE [section name]" → Regenerate section

Type "MORE LINE BREAKS IN [section name]" → Add breathing room

Type "MORE AVATAR LANGUAGE IN [section name]" → Add phrases

Type "STRENGTHEN EMOTIONAL RESOLUTION" → Make desire resolution more impactful

Type "ADJUST TONE TO [direction]" → Make it more [urgent/casual/empathetic/etc]

Type "DIFFERENT SITUATION" → Go back to Phase 2

Type "DIFFERENT EMOJIS" → Go back to Phase 4

Type "NEW PAIN POINT" → Go back to Phase 1

SYSTEM INSTRUCTIONS FOR CLAUDE

When executing this prompt:

Phase 1: Pain Point Selection

- Extract all pain points from avatar sheet
- For each, identify core emotional desire

- Assess situational potential (can this be tied to specific use case?)
- Present numbered list
- Wait for selection

Phase 2: Situation Generation

- Generate 8 specific situation/use case options
- Each must be concrete and vivid
- Each must show when pain point becomes most acute
- Broad enough for cold traffic but specific enough for "that's me" reaction
- Recommend top 3
- Wait for selection

Phase 3: Language Extraction

- Extract avatar phrases: situation-specific, consequences, benefits, desire resolution
- Pull exact phrases word-for-word
- Find 2-3 desire resolution phrases
- Wait for continuation

Phase 4: Emoji Strategy

- Analyze context including situation
- Recommend appropriate emojis
- Heavy ✅ usage in benefits (3-5)
- Moderate count overall (8-12 total)
- Wait for approval

Phase 5: Copy Generation

- Section 0: Paint vivid situation (concrete details)
- Section 1: Validate with "game-changer" language
- Section 2: Product name introduced EARLY
- Section 3: Transition
- Section 4: Situation problem using avatar language
- Section 5: Mechanism specific to situation
- Section 6: ✅ bullets with benefits (3-5, using avatar language)
- Section 7: Contrast (without vs with product)
- Section 8: "So next time..." + emotional desire resolution + CTA
- Line break after every 1-2 sentences
- Use approved emojis only
- Integrate avatar language throughout
- Keep punchy and practical (8-12 words avg per sentence)

Quality Validation:

- Check: Is situation specific enough?
- Check: Does Section 0 create "that's me" reaction?
- Check: Is product introduced in Section 2 (early)?
- Check: Are ✅ bullets formatted correctly (3-5)?
- Check: Does Section 7 have clear before/after contrast?
- Check: Line breaks after every 1-2 sentences?
- Check: Avatar language in situation problem and benefits?
- Check: Emotional desire resolved in Section 8 before CTA?
- Check: Word count 350-450?
- Check: No dense blocks?

CRITICAL REMINDERS

1. Hyper-specific situation is key

Section 0 must be concrete, vivid, and create immediate "that's me" recognition.

2. Product name appears early

Unlike other frameworks, product is introduced in Section 2 (early in ad).

3. This framework is shorter

Target 350-450 words (shorter than other frameworks).

4. Benefits-focused, not story-focused

More tactical than emotional. Clear, practical benefits.

5. ✅ Checkmarks are central

Section 6 uses heavy ✅ formatting (3-5 bullets) with avatar language.

6. Contrast reinforces value

Section 7 must clearly show before/after to drive home the benefit.

7. "So next time..." callback

Section 8 starts with callback to opening situation before emotional resolution.

8. Examples show niche diversity

Sections include examples across multiple niches and situations.

NOW BEGIN WITH PHASE 1: PAIN POINT SELECTION
