# PROMPT #1: MASS DESIRE DISCOVERY FROM MARKET RESEARCH

I am researching the mass desires that exist in the market for products in the **[PRODUCT CATEGORY]** space in **[COUNTRY]**.

**My product category is: [PRODUCT / PRODUCT CATEGORY]**

**For reference, here is my product: [INSERT LINK TO YOUR PRODUCT PAGE OR COMPETITOR PRODUCT PAGE]**

**And here is a similar product on Amazon: [INSERT AMAZON LINK TO SIMILAR PRODUCT]**

YOUR MISSION: Conduct systematic market research to discover what desires ALREADY EXIST in this market. Do not make assumptions about who the customer is or what they care about. Let the data reveal the desires, and let the desires reveal the customer.

You are a reporter, not a novelist. Report what the market says, not what you think they should say.

---

**SURFACE DESIRE → EMOTIONAL DRIVER QUICK REFERENCE**

**CRITICAL REQUIREMENT:** For EACH of the 10 surface desires you identify (5 Primary + 5 Secondary/Untapped), you MUST find and report EXACTLY 3 emotional drivers that fuel it. Every single surface desire must have 3 emotional drivers mapped to it. This is non-negotiable.

**DO NOT STOP until you have completed emotion mapping for ALL 10 surface desires.** If you find yourself stopping early, you have failed the assignment.

**PRIMARY SURFACE DESIRES:**

**Surface Desire #1:** [Insert primary surface desire]

1. [Top emotional driver - with frequency %]
2. [Second emotional driver - with frequency %]
3. [Third emotional driver - with frequency %]

**Surface Desire #2:** [Insert primary surface desire]

1. [Top emotional driver - with frequency %]
2. [Second emotional driver - with frequency %]
3. [Third emotional driver - with frequency %]

**Surface Desire #3:** [Insert primary surface desire]

1. [Top emotional driver - with frequency %]
2. [Second emotional driver - with frequency %]
3. [Third emotional driver - with frequency %]

**Surface Desire #4:** [Insert primary surface desire]

1. [Top emotional driver - with frequency %]
2. [Second emotional driver - with frequency %]
3. [Third emotional driver - with frequency %]

**Surface Desire #5:** [Insert primary surface desire]

1. [Top emotional driver - with frequency %]
2. [Second emotional driver - with frequency %]
3. [Third emotional driver - with frequency %]

**SECONDARY/UNTAPPED MARKET DESIRES:**

**Surface Desire #6:** [Insert secondary/untapped desire]

1. [Top emotional driver - with frequency %]
2. [Second emotional driver - with frequency %]
3. [Third emotional driver - with frequency %]

**Surface Desire #7:** [Insert secondary/untapped desire]

1. [Top emotional driver - with frequency %]
2. [Second emotional driver - with frequency %]
3. [Third emotional driver - with frequency %]

**Surface Desire #8:** [Insert secondary/untapped desire]

1. [Top emotional driver - with frequency %]
2. [Second emotional driver - with frequency %]
3. [Third emotional driver - with frequency %]

**Surface Desire #9:** [Insert secondary/untapped desire]

1. [Top emotional driver - with frequency %]
2. [Second emotional driver - with frequency %]
3. [Third emotional driver - with frequency %]

**Surface Desire #10:** [Insert secondary/untapped desire]

1. [Top emotional driver - with frequency %]
2. [Second emotional driver - with frequency %]
3. [Third emotional driver - with frequency %]

**VERIFICATION CHECKPOINT:** Before proceeding to Step 7 (Final Deliverable), verify you have completed emotional mapping for ALL 10 surface desires (30 total emotional driver entries). If you have fewer than 30 entries above, you must go back and complete the missing mappings.

---

CRITICAL DISTINCTION: WHAT IS A DESIRE?

DESIRES = OUTCOMES PEOPLE GET BY USING THE PRODUCT

A desire is something that happens in the customer's life or their beneficiary's life AS A RESULT OF USING the product.

Desires are:

- Health outcomes their pet/child/self experiences
- Behavioral changes that occur
- Problems that get prevented or solved
- Experiences they have
- Transformations that happen
- Financial outcomes they achieve

DESIRES ARE NOT: ❌ Product design requirements ("easy to clean", "dishwasher-safe", "few parts") ❌ Material specifications ("stainless steel", "ceramic", "BPA-free") ❌ Technical features ("wireless", "quiet", "durable", "replaceable parts") ❌

What they want the product TO BE (usability characteristics) ❌ What they want the product TO DO mechanically (eliminate bacteria, resist scratches)

These are product requirements, not desires. They describe what the product should be like, not what the customer gets from using it.

THE FUNDAMENTAL TEST: Before recording anything as a desire, ask: "Is this something they GET BY USING the product, or is this something they want the product TO BE?"

If it's what they GET BY USING → It's a desire ✓ If it's what they want it TO BE → It's a product requirement ❌

EXAMPLES TO CLARIFY:

For Cat Water Fountains:

CORRECT DESIRES (what they GET BY USING it): ✓ "I want my cat to drink more water" ✓ "I want to prevent my cat from getting UTIs" ✓ "I want to prevent my cat from getting kidney disease" ✓ "I want to prevent cat acne" ✓ "I want my cat to live longer" ✓ "I want to avoid expensive vet bills" ✓ "I want my cat to be healthy" ✓ "I want my cat to be hydrated"

INCORRECT - These are PRODUCT REQUIREMENTS (what they want it TO BE): ❌ "I want to spend less time cleaning" ❌ "I want to eliminate bacteria and slime" ❌ "I want a fountain that doesn't break" ❌ "I want easy maintenance" ❌ "I want quiet operation" ❌ "I want to reduce cleaning effort"

For Ergonomic Pillows:

CORRECT DESIRES (what they GET BY USING it): ✓ "I want to eliminate neck pain" ✓ "I want to sleep through the night" ✓ "I want to wake up without headaches" ✓ "I want better posture" ✓ "I want to reduce pain medication use"

INCORRECT - PRODUCT REQUIREMENTS: ❌ "I want a pillow that's easy to clean" ❌ "I want a pillow that stays cool" ❌ "I want adjustable firmness" ❌ "I want durable materials"

---

RESEARCH STANDARDS:

You have access to deep research capabilities. Use them fully. Do NOT limit yourself to minimum thresholds - go as deep as the data allows.

Target Research Scope:

Amazon Reviews:

- Analyze 100-200+ reviews across 10-15 competing/similar products
- Include full range: 1-star through 5-star
- Prioritize reviews with high helpfulness votes
- Look especially for: "would be perfect if...", "I wish...", "disappointed that...", "exactly what I needed because..."

Reddit:

- Scan 50-100+ posts and their comment threads from 5-10 relevant subreddits
- Sort by: Top (all time), Top (year), Controversial, and Recent
- Include both original posts AND high-engagement comments
- Look for: questions, complaints, recommendations, success stories

Forums & Quora:

- Analyze 30-50+ discussion threads across specialized forums
- Include long-form discussions (these often reveal deeper desires)
- Look for: recurring questions, common frustrations, "what I learned" posts

Social Media:

- Search 50+ posts across Facebook Groups, Twitter/X, TikTok, Instagram, YouTube comments
- Look for hashtags related to the product category and the problems it solves
- Include both organic posts and comments on brand content

Review Sites & Blogs:

- Scan 20-30+ professional reviews and their comment sections
- Include comparison articles ("Best X for Y")
- User testimonials and case studies

Total Target: 700-1000+ distinct customer voices

If you can analyze more, do it. More data = higher confidence in desire rankings.

Documentation requirement:

- Keep a running count of sources analyzed by platform
- Note any platform where you hit saturation (stopped finding new desires)

- Flag if certain platforms are more valuable than others for this category

---

RESEARCH APPROACH:

**PHASE 1: PRIMARY CATEGORY RESEARCH (First 500-700 sources)**

Phase 1A: Broad Scanning (First 200 sources)

- Cast a wide net across all platforms
- Identify the most common desire patterns
- Note which platforms yield the richest emotional language

Phase 1B: Deep Diving (Next 300+ sources)

- Focus on platforms/threads with highest desire density
- Look for edge cases and minority desires (track but don't prioritize)
- Validate that top desires from Phase 1A continue to dominate

Phase 1C: Saturation Check

- Are you still finding new desires, or just seeing repeats?
- If after 500+ sources you're only seeing repetition, you've hit saturation
- If new desires keep emerging, keep researching

Phase 1D: Intensity Deep Dive

- Go back to the highest-intensity emotional language
- Read full comment threads for context
- Understand the STORY behind the emotion (this will inform avatar building later)

**PHASE 2: ADJACENT PROBLEM SPACE RESEARCH (Additional 200-300 sources)**

**This is where you find the "snoring pillow" opportunities - the less obvious but potentially more valuable desires.**

Step 1: Identify the core mechanisms/benefits of the product

What does this product physically DO?

- Cat water fountain: circulates water, elevates water, filters water, makes sound, creates movement

- Neck pillow: supports neck, elevates head, aligns spine, changes sleeping position, provides firmness/softness
- Digestive supplement: changes gut bacteria, increases enzymes, affects motility, reduces inflammation

What are the biological/mechanical effects?

- Reduces pressure, improves circulation, changes angle, stimulates behavior, prevents buildup, etc.

Step 2: Research those MECHANISMS, not the product category

Search for communities/forums/reviews where people are trying to solve problems related to those mechanisms:

If product elevates head:

- Search: "sleep elevated," "acid reflux sleep," "snoring solutions," "sleep apnea," "GERD sleep," "nasal congestion sleep"

If product supports neck:

- Search: "neck alignment," "posture problems," "tension headaches," "TMJ," "cervical spine," "forward head posture"

If product changes gut bacteria:

- Search: "skin problems gut," "brain fog," "anxiety gut connection," "autoimmune," "histamine intolerance"

If product circulates/filters water:

- Search: "picky drinker," "water quality concerns," "pet hydration," "encourage drinking," "kidney support"

Step 3: Look for UNEXPECTED problem spaces where your product type appears

Scan these adjacent problem communities for mentions of your product type:

- Are people in snoring forums talking about pillows? → Neck pillow opportunity
- Are people in relationship forums talking about snoring? → Even bigger opportunity (emotional intensity)
- Are people in skin health forums talking about probiotics/digestive health? → Digestive supplement opportunity

- Are people in anxiety forums talking about gut health? → Secondary market

Step 4: Validate that the desire appears in market data

For each potential secondary/untapped desire, verify:

- Does this problem appear at least 10-15 times in your expanded research?
- Are people actively seeking solutions (not just mentioning it in passing)?
- Is there language showing they would consider THIS type of product as a solution?
- Is there emotional intensity (4.0+) around this problem?

Step 5: Log as "Secondary/Untapped Market Desire" if:

- The desire exists (people want this outcome)
- The product could believably deliver it (even if it's not the "obvious" use)
- There's emotional intensity (4.0+)
- It appears at least 10-15 times in research
- It represents a potentially less saturated market opportunity

---

DATA QUALITY INDICATORS:

Strong research is characterized by:

- Repetition: Top desires appear dozens/hundreds of times
- Platform diversity: Same desires emerge across Reddit, Amazon, forums, social media
- Emotional consistency: Same emotional drivers appear across different customer voices
- Saturation: After 300-500 sources, you stop finding genuinely new desires

Weak research is characterized by:

- Each desire only appears a handful of times
- Desires are platform-specific (only on Reddit, not elsewhere)
- You're still finding completely new desires after 500+ sources (suggests fragmented market)
- Emotional language is vague or inconsistent

---

STEP 1: DISCOVER PRIMARY SURFACE DESIRES

WHAT YOU'RE LOOKING FOR: Outcomes, experiences, or transformations that happen in the customer's life or their beneficiary's life BY USING the product.

Focus on:

- Health outcomes (prevention, improvement, maintenance)
- Behavioral changes (drinking more, sleeping better, eating healthier)
- Life improvements (more time, less stress, better relationships)
- Problem avoidance (prevent disease, avoid costs, stop suffering)
- Transformations (getting life back, regaining confidence, ending embarrassment)

WHAT TO IGNORE: Product design requirements, usability characteristics, material preferences, technical specifications, features.

DETECTION LOGIC:

IF customer mentions product feature/design/material/usability
  THEN skip it (not a desire)

IF customer mentions outcome/result/experience they get BY USING product
  THEN record as desire

MANDATORY FILTERING:

Before recording any desire, verify:

1. Does this describe something that HAPPENS by using the product? (YES = continue, NO = reject)
2. Is this about the beneficiary's health, behavior, or experience? (YES = continue, NO = evaluate further)
3. Is this about a life outcome or transformation for the customer? (YES = continue, NO = evaluate further)
4. Could this exist independent of how the product is designed? (YES = continue, NO = reject as product requirement)

Extract and list PRIMARY SURFACE DESIRES using this format: "I want [outcome that happens BY USING the product]"

CRITICAL FORMATTING RULES:

- ONE desire = ONE outcome
- Must describe something that HAPPENS or CHANGES by using the product

- Must be about beneficiary outcomes OR customer life transformations
- NOT about product characteristics, usability, or mechanical functions
- NO em dashes (—), semicolons, or compound statements
- NO "and" or "or" connecting multiple wants
- Maximum 10 words per statement

For each primary surface desire, track:

| Surface Desire | Frequency Count | Platform Distribution | Sample Quotes (3-5) | Context Notes |
|---|---|---|---|---|
| "I want my cat to drink more water" | 150 | Amazon (65), Reddit (50), Forums (35) | [verbatim quotes] | Often mentioned after vet visits |

---

STEP 1.5: KEYWORD FREQUENCY TRACKING

As you conduct your research, maintain an ongoing tracker of high-signal keywords that appear frequently across customer language. These keywords often reveal:

- Specific pain points
- Medical/technical terms customers use
- Problem descriptors
- Outcome descriptors

WHAT TO TRACK:

Category 1: Medical/Health Keywords

- Specific conditions, diseases, or symptoms customers mention
- Examples: "sciatica," "UTI," "kidney disease," "CKD," "blockage," "crystals," "acne"

Category 2: Pain Point Keywords

- Descriptive words for problems or frustrations
- Examples: "slime," "mold," "biofilm," "broke," "died," "loud," "leaking"

Category 3: Emotional Intensity Keywords

- Words that signal strong emotions

- Examples: "terrified," "devastated," "nightmare," "lifesaver," "miracle," "horrible"

Category 4: Outcome/Benefit Keywords

- Words describing positive results
- Examples: "thrilled," "finally," "works," "drinks more," "healthy," "relief"

Category 5: Authority/Influence Keywords

- Terms showing who influences their decision
- Examples: "vet recommended," "Jackson Galaxy," "veterinarian said," "breeder told me"

HOW TO TRACK:

Create a running tally as you analyze sources. Use this format:

KEYWORD FREQUENCY TRACKER

Medical/Health Terms:

- "kidney disease" / "CKD" / "renal failure" - 180 mentions
- "UTI" / "urinary tract infection" / "cystitis" - 150 mentions
- "crystals" - 85 mentions
- "blockage" - 60 mentions
- "dehydration" - 95 mentions
- "cat acne" / "chin acne" - 45 mentions

Pain Point Terms:

- "slime" / "pink slime" / "slimy" - 155 mentions
- "mold" / "moldy" / "mildew" - 125 mentions
- "broke" / "died" / "stopped working" - 130 mentions
- "loud" / "noisy" / "buzzing" - 78 mentions
- "hard to clean" / "difficult to clean" - 210 mentions
- "pump failure" - 75 mentions

Emotional Intensity Terms:

- "terrified" / "scared" / "afraid" - 145 mentions
- "frustrated" / "annoying" / "fed up" - 160 mentions
- "devastated" / "heartbroken" - 55 mentions
- "lifesaver" / "game changer" - 35 mentions
- "nightmare" / "horrible" / "awful" - 90 mentions

Outcome/Benefit Terms:

- "drinks more" / "drinking more" - 200 mentions
- "finally" (as in "finally works") - 85 mentions
- "love it" / "loves it" - 110 mentions
- "peace of mind" - 28 mentions
- "worth it" - 65 mentions

Authority/Influence Terms:

- "vet recommended" / "vet said" - 95 mentions
- "Jackson Galaxy" - 12 mentions
- "veterinarian" (general) - 78 mentions

KEYWORD ANALYSIS RULES:

1. Count variations together:
- "UTI" + "urinary tract infection" + "cystitis" = ONE keyword group
- "slime" + "slimy" + "pink slime" = ONE keyword group
- "broke" + "died" + "stopped working" = ONE keyword group
2. Note the exact phrasing customers use:
- If they say "pink slime" (not just "slime"), that specific phrase matters
- If they say "vet recommended" (not "veterinarian said"), track that distinction
3. Track intensity modifiers:
- "very" / "extremely" / "incredibly" appearing before keywords
- ALL CAPS usage
- Exclamation points
4. Context matters:
- Track if keywords appear in positive or negative contexts
- Example: "slime" is always negative, "lifesaver" is always positive

WHAT TO DO WITH KEYWORD DATA:

In your final report, include a section:

KEYWORD FREQUENCY ANALYSIS

Top 10 Most-Mentioned Keywords Overall:

- "drinks more" / "drinking more" - 200 mentions (outcome keyword - POSITIVE)
- "hard to clean" - 210 mentions (pain point keyword - NEGATIVE)
- "kidney disease" / "CKD" - 180 mentions (medical keyword - FEAR TRIGGER)
- "frustrated" / "annoying" - 160 mentions (emotional keyword - NEGATIVE)

- "slime" / "pink slime" - 155 mentions (pain point keyword - NEGATIVE) [continue...]

Most Frequent Medical Terms: [List with counts]

Most Frequent Pain Points: [List with counts]

Strategic Insights from Keywords:

- The phrase "pink slime" appears 155 times and is universally negative - this is a major market pain point
- "Vet recommended" appears 95 times, showing veterinarian authority is a key trust signal
- "Kidney disease" (180 mentions) appears more than "UTI" (150), suggesting kidney concerns may be the primary fear
- "Hard to clean" (210 mentions) is the #1 product complaint keyword

---

STEP 2: DISCOVER SECONDARY/UNTAPPED MARKET DESIRES

After identifying your primary surface desires, conduct Phase 2 research to discover NON-OBVIOUS applications of the product in adjacent problem spaces.

**CRITICAL: SECONDARY DESIRES MUST STILL BE OUTCOMES, NOT PRODUCT FEATURES**

Secondary/untapped desires follow the SAME rules as primary desires:

- They must be outcomes that HAPPEN in the customer's or beneficiary's life BY USING the product
- They are NOT about product placement, monitoring, convenience, or avoiding mess
- They are NOT about usability or product characteristics

**INCORRECT Secondary Desires (these violate the outcome rule):** ❌ "I want to know my cat is healthy (via monitoring)" - This is about observing/tracking, not an outcome ❌ "I want to place the fountain where my cat will actually drink" - This is product placement, not an outcome ❌ "I want to stop my cat from making a mess" - This is avoiding inconvenience, not a beneficiary outcome

**CORRECT Secondary Desires (these ARE outcomes):** ✓ "I want to reduce my cat's vomiting" - Health outcome from better hydration ✓ "I want to improve my cat's dental

health" - Health outcome from water flow ✓ "I want to stop my cat's hairballs" - Health outcome from increased hydration

The fact that a desire is "secondary" or "untapped" does NOT change the fundamental rule: it must describe something that HAPPENS to the beneficiary or in the customer's life, not what the product does or where it goes.

EXAMPLES OF SECONDARY/UNTAPPED DESIRES:

For Cat Water Fountains: PRIMARY: "I want my cat to drink more water" SECONDARY: "I want to reduce my cat's vomiting" SECONDARY: "I want my senior cat to be more active" SECONDARY: "I want to improve my cat's dental health"

For Neck Pillows: PRIMARY: "I want to eliminate neck pain" SECONDARY: "I want to stop snoring" SECONDARY: "I want to save my relationship" SECONDARY: "I want to reduce acid reflux at night"

For Digestive Supplements: PRIMARY: "I want to eliminate bloating" SECONDARY: "I want clearer skin" SECONDARY: "I want to reduce brain fog" SECONDARY: "I want to improve my mood"

For each secondary/untapped surface desire, track:

| Surface Desire | Frequency Count | Platform Distribution | Sample Quotes | Context Notes | Why It's Non-Obvious |
|---|---|---|---|---|---|
| "I want to stop snoring" | 45 | Reddit (20), Sleep Forums (15), Relationship Forums (10) | [quotes] | Often in relationship conflict contexts | Most people don't think "pillow" for snoring |

Additional tracking criteria for secondary desires:

- Why It's Non-Obvious: Explain why this desire is not the first thing someone thinks of when they see this product category
- Market Saturation Assessment: Are competitors targeting this desire? (Lower competition = higher opportunity)

---

STEP 3: DISCOVER EMOTIONAL DRIVERS

For every piece of customer language you analyzed (both primary AND secondary desires), now look for the EMOTIONAL FUEL behind their surface desires.

**CRITICAL: Emotional drivers are the DEEPEST emotional layer - the raw feelings that exist in their life, NOT about product experiences or shopping frustration.**

**AS YOU RESEARCH, YOU MUST ACTIVELY LOOK FOR AT LEAST 3 DISTINCT EMOTIONAL DRIVERS FOR EACH SURFACE DESIRE.** Customers experience complex, layered emotions around each specific outcome they seek.

WHAT ARE EMOTIONAL DRIVERS?

Emotional drivers are the core feelings, fears, anxieties, shame, pride, or social consequences that fuel the desire for an outcome.

They answer: "WHY does this outcome matter to me emotionally? What am I feeling in my life situation?"

CRITICAL DISTINCTION: EMOTIONAL DRIVERS VS. SHOPPING FRUSTRATION

**CORRECT - These are about LIFE FEELINGS:** ✓ "I'm scared my cat will die from kidney disease" ✓ "I feel guilty I'm not doing enough for my cat" ✓ "I'm embarrassed when my stomach looks pregnant in public" ✓ "I'm anxious my relationship will end because of my snoring"

**INCORRECT - These are about PRODUCT/SHOPPING EXPERIENCE:** ❌ "I'm frustrated by products that don't work" ❌ "I'm angry about wasting money on failed products" ❌ "I'm tired of products breaking" ❌ "I feel disappointed by poor quality"

The emotional driver should exist BEFORE they start shopping. It's about the problem in their life, not their buying experience.

EMOTIONAL DRIVER FORMATS:

Emotional drivers can appear in research as:

**Primary format (raw emotion with context):**

- "I'm [emotion] [specific context/trigger]"
    - "I'm scared my cat will die from dehydration"
    - "I'm embarrassed when people can see my bloated stomach"
    - "I'm terrified of losing my partner"
- "I feel [emotion] [specific situation]"
    - "I feel guilty keeping my partner awake all night"

    - "I feel ashamed of how I look"
    - "I feel helpless about my cat's declining health"

**Secondary formats (when these actually appear in research):**

- "I want to feel [positive emotion]"
    - "I want to feel confident in social situations"
    - "I want to feel proud of taking care of my cat"

**Statements that seem like emotional drivers but need deeper digging:**

- "I want to be seen as [identity]" → DIG DEEPER: What emotion drives this?
    - "I want to be seen as a good cat owner" → Underlying: "I feel guilty I'm failing my cat"
- "I want to avoid [social consequence]" → DIG DEEPER: What emotion drives this?
    - "I want to avoid conflict with my partner" → Underlying: "I'm scared my relationship will end"

**CRITICAL RULE: DIG TO THE DEEPEST EMOTIONAL LAYER**

When you see statements like "I want to avoid X" or "I want to be seen as X," these are NOT the emotional drivers themselves. Ask WHY:

- "I want to avoid judgment" → WHY? → "I'm embarrassed about my appearance"
- "I want to be seen as a good owner" → WHY? → "I feel guilty I'm not doing enough"
- "I want to avoid conflict" → WHY? → "I'm scared of losing my partner"

The emotional driver is the raw feeling underneath, not the behavioral desire.

**CONTEXT IS MANDATORY**

Never record a generic emotion without specific context:

❌ "I'm embarrassed" → Too vague, unusable ✓ "I'm embarrassed when my stomach looks pregnant in public"

❌ "I'm scared" → Too vague ✓ "I'm scared my cat will die from kidney disease"

❌ "I feel guilty" → Too vague ✓ "I feel guilty I'm disrupting my partner's sleep every night"

The context makes it actionable for marketing.

Core emotion categories to identify:

1. FEAR - Anxiety, worry, dread, terror Keywords: "scared," "afraid," "worried," "terrified," "anxious," "what if," "concerned"

2. GUILT/SHAME - Feeling inadequate, judged, embarrassed, responsible for harm Keywords: "bad [owner/parent/person]," "should have," "embarrassed," "ashamed," "judged," "failing," "my fault"

3. FRUSTRATION/HELPLESSNESS - Feeling powerless, stuck, unable to fix the problem Keywords: "helpless," "can't fix," "nothing works," "stuck," "powerless," "desperate"

4. SADNESS/GRIEF - Loss, regret, disappointment, heartbreak Keywords: "heartbroken," "devastated," "regret," "miss," "lost," "sad," "depressed"

5. LOVE/PROTECTION - Nurturing, caring, safeguarding, devotion Keywords: "love," "care for," "protect," "keep safe," "my baby," "precious"

6. PRIDE/CONFIDENCE - Feeling competent, responsible, capable Keywords: "proud," "confident," "doing the right thing," "good [owner/parent]," "capable"

7. SOCIAL ANXIETY/EMBARRASSMENT - Fear of judgment, being seen negatively Keywords: "people will think," "judgment," "stare," "notice," "embarrassing," "humiliating"

EXAMPLES OF CORRECT EMOTIONAL DRIVERS:

For Cat Water Fountains: ✓ "I'm scared my cat will die from kidney disease" ✓ "I feel guilty I didn't notice my cat wasn't drinking enough" ✓ "I'm terrified of losing another pet" ✓ "I feel helpless watching my cat decline" ✓ "I'm anxious about expensive vet bills I can't afford"

For Neck Pillows (Snoring Application): ✓ "I'm embarrassed my partner complains about my snoring" ✓ "I'm scared my relationship will end because of this" ✓ "I feel guilty disrupting my partner's sleep every night" ✓ "I'm anxious I have a serious health problem" ✓ "I'm worried my partner resents me"

For Digestive Supplements: ✓ "I'm embarrassed when my stomach looks pregnant in public" ✓ "I feel ashamed of how my body looks" ✓ "I'm scared this is a sign of

something worse" ✓ "I feel helpless after trying everything" ✓ "I'm anxious in social situations because of my symptoms"

Extract and list EMOTIONAL DRIVERS using these formats:

**Primary (most common in research):** "I'm [emotion] [specific context/trigger]" "I feel [emotion] [specific situation]"

**Secondary (when it appears naturally):** "I want to feel [emotion]"

**Remember: Always include specific context. Dig past "want to avoid" or "want to be seen as" statements to find the raw emotion underneath.**

For each emotional driver, track:

| Emotional Driver | Frequency Count | Intensity (1-5) | Platform Distribution | Sample Quotes (3-5) | Associated Surface Desires |
|---|---|---|---|---|---|
| "I'm scared my cat will die from kidney disease" | 180 | 5.0 | Amazon (80), Reddit (65), Forums (35) | [verbatim quotes] | "Want cat to drink more," "Prevent UTIs," "Prevent kidney disease" |

Tracking criteria:

- Frequency: How many times this emotion appears
- Intensity: Rate 1-5 based on language strength
    - 1 = Mild ("a bit worried")
    - 3 = Moderate ("really concerned")
    - 5 = Extreme ("terrified," "devastated," ALL CAPS, "nightmare")
- Platform distribution: Where it appears
- Sample quotes: Verbatim emotional language
- Associated surface desires: Which outcomes does this emotion fuel?

---

STEP 4: MAP EMOTIONAL DRIVERS TO SURFACE DESIRES

Create a connection map showing which emotions drive which surface outcomes.

**MANDATORY: FIND 3 EMOTIONAL DRIVERS FOR EVERY SURFACE DESIRE**

You MUST identify at least 3 distinct emotional drivers for each of your 10 surface desires (5 primary + 5 secondary/untapped). This means you will produce a minimum of 30 emotional driver entries in Step 4.

**If you cannot find 3 emotions that meet the 10% threshold for a surface desire:**

1. Lower the threshold to 5% for that specific desire
2. Look for secondary or underlying emotions in the customer language
3. Look at the STORY and CONTEXT around the desire - what life situation creates this need?
4. Consider emotions IMPLIED by intensity of language
5. Document: "This emotion appears in only [X]% of mentions but included to meet minimum requirement"

**DO NOT PROCEED TO STEP 5 until you have identified 3 emotional drivers for ALL 10 surface desires.**

**CRITICAL: Emotions Should Repeat Across Surface Desires**

Do NOT try to find "unique" emotions for each surface desire. The same emotional driver will naturally appear across multiple surface desires - this is correct and expected.

Report ALL emotions that actually drive each specific surface desire, regardless of whether they appeared for other desires.

Example of correct repetition:

"I'm scared my cat will die from kidney disease" may drive:

- "I want to prevent kidney disease" (120/180 mentions = 67%)
- "I want to prevent UTIs" (80/150 mentions = 53%)
- "I want my cat to drink more water" (55/100 mentions = 55%)

This repetition is CORRECT. It shows that one powerful emotion (fear of death) is the primary driver across multiple related health desires.

Format:

**PRIMARY SURFACE DESIRE #1: "I want my cat to drink more water"** Total mentions: 150

EMOTIONAL DRIVERS (ranked by frequency):

1. "I'm scared my cat will die from dehydration" - 105 mentions (70%)
    - Intensity: 5.0/5
    - Evidence: [5 quotes showing this fear]
2. "I feel guilty I didn't notice the problem sooner" - 45 mentions (30%)
    - Intensity: 4.5/5
    - Evidence: [5 quotes showing guilt]
3. "I feel helpless watching my cat's health decline" - 20 mentions (13%)
    - Intensity: 4.0/5
    - Evidence: [5 quotes showing helplessness]

**Do this for EVERY surface desire (all 10).**

**VERIFICATION STEP:** Before moving to Step 5, count your emotion mappings:

PRIMARY SURFACE DESIRES:

- Desire #1: ___ emotions (must be ≥3)
- Desire #2: ___ emotions (must be ≥3)
- Desire #3: ___ emotions (must be ≥3)
- Desire #4: ___ emotions (must be ≥3)
- Desire #5: ___ emotions (must be ≥3)

SECONDARY/UNTAPPED DESIRES:

- Desire #6: ___ emotions (must be ≥3)
- Desire #7: ___ emotions (must be ≥3)
- Desire #8: ___ emotions (must be ≥3)
- Desire #9: ___ emotions (must be ≥3)
- Desire #10: ___ emotions (must be ≥3)

**TOTAL: ___ emotion entries (must be ≥30)**

---

STEP 5: QUANTITATIVE RANKING

Create three master ranking tables:

**TABLE A: PRIMARY SURFACE DESIRES (Ranked by Frequency)**

| Rank | Surface Desire | Total Mentions | Platform Diversity | % of Total | Top 3 Quotes |
|---|---|---|---|---|---|
| 1 | "I want my cat to drink more water" | 150 | 4 | 32% | [quotes] |
| 2 | "I want to prevent UTIs in my cat" | 120 | 4 | 26% | [quotes] |

**TABLE B: SECONDARY/UNTAPPED MARKET DESIRES (Ranked by Opportunity Score)**

| Rank | Surface Desire | Total Mentions | Emotional Intensity | Market Saturation | Opportunity Score |
|---|---|---|---|---|---|
| 1 | "I want to stop snoring" | 45 | 4.8/5 | Low | HIGH |
| 2 | "I want to save my relationship" | 30 | 5.0/5 | Very Low | VERY HIGH |

Opportunity Score Calculation:

- Opportunity Score = (Emotional Intensity × Market Gap) / Competition Level
- Market Gap = How unmet is this need? (Low/Medium/High)
- Competition Level = How many brands are targeting this? (High/Medium/Low)

**TABLE C: EMOTIONAL DRIVERS (Master Ranking - Across All Surface Desires)**

| Rank | Emotional Driver | Total Mentions | Avg Intensity | Platform Diversity | % of Total | Drives Which Surface Desires |
|---|---|---|---|---|---|---|
| 1 | "I'm scared my cat will die from kidney disease" | 180 | 5.0 | 4 | 45% | [list desires #1, #2, #3] |
| 2 | "I feel helpless about my cat's health" | 115 | 4.5 | 3 | 29% | [list desires] |

RANKING THRESHOLDS:

**Primary Surface Desires:**

- Report the top 5 primary surface desires by frequency
- BUT ONLY if they meet the minimum threshold:
    - Minimum 15 mentions to qualify as a "mass" desire
    - Appears on at least 2 different platforms (not platform-specific)
    - Must be outcomes BY USING the product, not product requirements

If only 3 desires meet the threshold, report 3. Do not invent or force desires to reach 5.

**Secondary/Untapped Market Desires:**

- Report the top 5 secondary desires by OPPORTUNITY SCORE
- Minimum threshold:
    - Minimum 10 mentions (lower than primary because these are less obvious)
    - Emotional intensity of at least 4.0/5
    - Appears on at least 2 platforms
    - Clear evidence that product could believably deliver this outcome

If only 3 secondary desires meet the threshold, report 3. These are harder to find, so 3-5 is realistic.

**Emotional Drivers (Master Ranking):**

- Report the top 5-7 emotional drivers by frequency across ALL surface desires
- BUT ONLY if they meet the minimum threshold:
    - Minimum 20 mentions across all surface desires
    - Average intensity of at least 3.0/5
    - Appears in connection with at least 2 different surface desires

Quality over quantity: It is better to report 3 well-evidenced desires with strong data than to report 5 desires where the last two are speculative or weakly supported.

---

STEP 6: IDENTIFY DESIRE CLUSTERS (Natural Avatar Segments)

Look for patterns revealing natural customer segments based on desires.

DO NOT create demographic segments yet. Instead, identify:

**Desire-Based Segments:**

- Which desires tend to appear together in the same customer voice?
- Are there distinct "desire profiles" that emerge?
- Do certain emotional drivers cluster together?

Example patterns you might find:

**SEGMENT A: "The Anxious Protector"**

- Dominated by FEAR emotions
- Primary desires: "Prevent illness," "Avoid death," "Prevent costly vet bills"
- Language intensity: HIGH
- Trigger: Past loss or vet warnings

**SEGMENT B: "The Helpless Sufferer"**

- Dominated by HELPLESSNESS and FRUSTRATION emotions
- Primary desires: "Find what finally works," "Stop the suffering"
- Language intensity: VERY HIGH
- Trigger: Years of failed solutions

**SEGMENT C: "The Guilt-Driven Caretaker"**

- Dominated by GUILT and SHAME emotions
- Primary desires: "Provide the best care," "Prevent problems I caused"
- Language intensity: MODERATE
- Trigger: Discovery of harm or inadequacy

For each segment, note:

- Core emotional driver (primary emotion)
- Top 3-5 surface desires they express
- Behavioral indicators you observe (how often they post, what they've tried, etc.)
- Experience markers (past traumas, failures, discoveries mentioned)
- Language patterns (tone, urgency, vocabulary)

DO NOT YET assign demographics. Let the desires define the segment first.

ONLY report segments if clear patterns emerge. If the data doesn't naturally cluster into distinct segments, don't force it.

---

STEP 7: FINAL DELIVERABLE

Provide a comprehensive report with:

**1. Executive Summary**

- Total sources analyzed: [X] (target: 700-1000+)
- Breakdown by platform: Amazon ([X]), Reddit ([X]), Forums ([X]), Social ([X]), Other ([X])
- Date range of data
- Top 5 primary surface desires by frequency (only those meeting minimum threshold - must be outcomes BY USING product)
- Top 5 secondary/untapped desires by opportunity score
- Top 5-7 emotional drivers by frequency + intensity (only those meeting minimum threshold)
- Number of natural desire-based segments identified (if patterns emerge)
- Confidence level: [High/Medium/Low] with justification

**2. Surface Desire Rankings**

**TABLE A: PRIMARY SURFACE DESIRES** List 3-5 desires (or however many meet threshold) Each one must be an outcome BY USING the product, not a product requirement For each: frequency, platform distribution, confidence score

**TABLE B: SECONDARY/UNTAPPED MARKET DESIRES** List 3-5 desires (or however many meet threshold) For each: frequency, emotional intensity, market saturation assessment, opportunity score, why it's non-obvious

**3. Emotional Driver Rankings**

**TABLE C: EMOTIONAL DRIVERS (Master List)** List 5-7 core emotions (or however many are clearly present) Cross-surface analysis: which emotions appear most frequently overall For each: total mentions, average intensity, platform diversity, which surface desires it drives

**4. Emotion-to-Surface Mapping**

For each of the 10 surface desires: ALL emotional drivers meeting the 10% threshold (MINIMUM 3, no maximum)

Format for each desire:

- Surface Desire statement

- Total mentions
- List of 3+ emotional drivers with:
    - Frequency and percentage
    - Intensity rating
    - Evidence (sample quotes)

Include "Other/Unclear" category if needed rather than forcing emotions Note when the same emotion appears across multiple desires (this is expected and correct)

**VERIFY: You must have at least 30 total emotion mapping entries (3 per surface desire × 10 desires)**

**4.5 Avatar Targeting Statements**

For each of the 10 surface desires, create a clear targeting statement that helps marketers visualize who they're targeting and why.

Format: "I am targeting people who want to [SURFACE DESIRE] because they [TOP EMOTIONAL DRIVER]."

Example Avatar Targeting Statements:

**PRIMARY DESIRES:**

1. "I am targeting people who want their cat to drink more water because they're scared their cat will die from kidney disease."

2. "I am targeting people who want to prevent UTIs in their cat because they feel guilty about not taking better care of their cat's health."

3. "I am targeting people who want to eliminate bloating because they're embarrassed when their stomach looks pregnant in public."

**SECONDARY/UNTAPPED DESIRES:** 6. "I am targeting people who want to stop snoring because they're scared their relationship will end due to disrupting their partner's sleep."

7. "I am targeting people who want to reduce their cat's vomiting because they feel helpless watching their cat suffer daily."

**Instructions:**

- Use the #1 ranked emotional driver for each surface desire
- Keep statements concise and actionable
- Focus on the core "who" (surface desire) and "why" (emotional driver)
- These statements should instantly help a marketer understand the customer psychology

**5. Natural Desire-Based Segments**

- Only if clear patterns emerge - do not force
- 2-5 segments with full profiles
- If no clear segments emerge, state this explicitly

**6. Research Quality Metrics:**

- Total customer voices analyzed
- Platform saturation indicators (where you stopped finding new patterns)
- Data recency and date distribution
- Confidence assessment for each top desire
- Limitations or gaps in research

**7. Honest Assessment:**

- Were there any desires you expected to find but didn't?
- Were there any surprises in the data?
- Any platform-specific anomalies worth noting?
- What desires did NOT make the cut and why?

**8. Product Requirements Log (Separate from Desires):**

Track product requirements customers mentioned, but DO NOT include these in surface desires:

| Product Requirement Mentioned | Frequency | Why It's Not a Desire |
|---|---|---|
| "Easy to clean" | 210 | This is a usability requirement, not an outcome BY USING the product |
| "Stainless steel" | 180 | This is a material specification, not an outcome BY USING the product |

---

QUALITY CHECKLIST:

Before submitting, verify:

[ ] Analyzed 700-1000+ distinct customer voices (or documented why fewer) [ ] Every surface desire is an outcome BY USING the product (beneficiary health, behavior, life transformation) [ ] NO surface desires describe product usability, maintenance, characteristics, or mechanical functions [ ] NO surface desires contain "spend less time", "reduce effort", "eliminate [mechanical thing]", or similar product requirement language [ ] Found 10 total surface desires (5 primary + 5 secondary/untapped) [ ] Every emotional driver is about LIFE FEELINGS, not product/shopping experience [ ] Every emotional driver includes specific context/trigger (not generic emotions) [ ] Emotional drivers are the DEEPEST layer (dug past "want to avoid" or "want to be seen as" statements) [ ] Found EXACTLY 3 emotional drivers for EACH of the 10 surface desires (30 total) [ ] Reported ALL emotions meeting 10% threshold for each surface desire (not artificially limited) [ ] Same emotions appear across multiple desires where appropriate (repetition is correct) [ ] Only reported desires that meet minimum thresholds [ ] Did NOT force desires to hit target numbers [ ] Natural segments emerge from desire patterns (not demographics) [ ] All quotes are verbatim with sources noted [ ] Acknowledged any limitations or gaps in the research [ ] Separated product requirements from desires [ ] Created avatar targeting statements for all 10 desires

---

**FINAL REMINDER:**

Surface desires = outcomes people GET BY USING the product

- Beneficiary health outcomes
- Behavioral changes
- Life transformations
- Problem prevention
- Financial outcomes

NOT product requirements:

- Usability characteristics (easy to clean, quiet, convenient)
- Mechanical functions (eliminate bacteria, resist scratches)
- Materials or features (stainless steel, wireless, dishwasher-safe)
- Product placement or monitoring capabilities

Emotional drivers = the raw feelings in their life situation that fuel the desire for those outcomes

- Fear, guilt, embarrassment WITH SPECIFIC CONTEXT

- NOT product frustration or shopping experience
- Must be the DEEPEST emotional layer (not "want to avoid X")

Structure:

- 10 surface desires (5 primary + 5 secondary/untapped)
- 3 emotional drivers for EACH desire
- Total: 30 emotion mappings
- Non-negotiable.
